

AutoTrack v8.52 released with Online Vehicle Libraries

*Up to a thousand vehicles built in and now
hundreds more available online*

FOR IMMEDIATE RELEASE
9th June 2009

Savoy Computing Services Ltd, authors of AutoTrack, the world's most advanced vehicle swept path analysis software, have released an update that allows users to access online vehicle libraries.

Even though AutoTrack is supplied with over a thousand vehicles there is always a need for new variants which, until now, could only be made widely available in the next release of the software. Now, with their online vehicle libraries, Savoy have overcome this problem and can now make new vehicles available to all users at very short notice. A link, direct from the Vehicle Library Explorer, allows users to search online for the required vehicle; once found, they simply select it for download and it is added to a local library of downloaded vehicles and can be used just like any other vehicle. The vehicles are completely free to holders of valid support, maintenance and update contracts.

When the system went live, last month, it had around 400 vehicles and Savoy plan to add more on a regular basis and in response to requests.

Compatibility

AutoTrack 8.52 is natively compatible with
AutoCAD 14 to 2010 (32 & 64-bit versions) and all derivative products
Microstation 95 to V8i
PowerDraft 7.0 to V8i
PowerCivil XM
Bentley MX XM to V8i

About Savoy Computing Services

Savoy Computing Services Ltd have led the development of innovative vehicle swept path solutions since the late 1980s. Their products, which are regarded as standard design tools by many companies, provide architects, designers and engineers with the most advanced and comprehensive set of vehicle access planning tools available today. Savoy are Autodesk Authorized Developers and Bentley Enterprise Developers and their products run seamlessly on over 70 CAD variants, as well as stand-alone in Microsoft Windows. For more information on our products please visit www.savoy.co.uk.
